

BFE New Line Series - Monitor Wall System

One system – countless variations and possibilities for expansion

The **BFE New Line Series Monitor Wall System** is used for setting up monitor walls in different configurations. The dimensions of the wall can vary thanks to its overall structure of aluminum profiles with furrows in which several crossbars can be attached in variable heights. The aluminum profiles are powder coated in RAL colors.

Through the modular nature of the system, even large monitor walls can be easily set up or expanded at a later date.

The **BFE New Line Series Monitor Wall System** guarantees steady positioning through screw connections in the feet and for the wall. Several rows of displays can be attached by using additional crossbars. Easy cable management is achieved by a cable tray bolted to the crossbars (horizontal cable routing) and cable trenches in the monitor stack's feet (vertical cable routing). This way, no cables are visible from the front and all cabling can be done invisibly from the device, through the monitor wall and into a raised floor.

A large variety of VESA compatible display mounts is available (fixed or with swinging / tilting features). With several rows of screens, we recommend the use of an optional pull-out display support to gain easy access to all cables and connections for service staff.

Specialized mounts for clocks, speakers, etc. can be bolted to the furrows of the aluminum profiles and crossbars or can be attached to VESA mounts. Once the screen sizes change, all other supports of attached devices can be adapted easily to the new dimensions.

Key Features

- Modular system concept
- Versatile possibilities for configuration through a sophisticated system of furrows – also facilitates exact fitting of equipment
- Intelligent, clean cable management
- Flexible and easy to change configuration – an extra protection of your investment even when screen types change
- Simple expansion through the use of additional crossbars
- Lightweight through aluminum profiles
- Custom color design in RAL colors

Options

- Extendable wall mounts with click-out system for maximum service accessibility
- Screen mounts with swinging / tilting features (VESA compatible)
- Stepless adjustability for seamless fitting of screens
- Tailor-made mounts for special equipment, such as clocks, speakers, etc.
- Base cabinets (with/without doors, acoustic front panels, as well as 19" racks) – also available as subsequent upgrade

Application Areas

- Audio/video production areas
- Master control rooms / playout centers
- (Industrial) control rooms
- Situation rooms
- Conference rooms
- Airports / train stations
- Shopping centers / exhibition centers

BFE New Line Series - Monitor Wall System

One system – countless variations and possibilities for expansion

Option: Base Cabinet

BFE New Line Series Monitor Wall System base cabinets are an ideal expansion option. The cabinet can hold technical equipment, cables, computers and more. Lockable doors, acoustic front panels, 19" racks (with or without additional door) and adjustable shelf heights are available as options.

Easy cable management is achieved by routing through the inside of shelves, columns and the raised floor. In the example shown above, the columns are integrated into the cabinet's corpus. Optionally cabinets can be placed between columns, leaving them visible. This also makes it possible to add base cabinets to already existing monitor walls. Base cabinets are available in natural wood, with resopal coated surface or with painted finish.

The clever climatization system is available as an optional extra. It blows a stream of air through the cabinet and under the screens above it to create a "wall" of cold air, climatizing all equipment.

Service

The **BFE New Line Monitor Wall System** gives you the possibility to get exactly the solutions you need in any situation. If you have other wishes, requirements or questions, do not hesitate to contact us. We are looking forward to develop the right solution for you.

BFE Studio und Medien Systeme GmbH is an international manufacturer and system integrator for the professional media workflows headquartered in Germany. For further information visit us at www.bfe.tv.
